

Condat Hall 10 A-52

What's to see? Borax-free and titanium dioxide-free dry drawing soaps that can provide manufacturers the results they need ... even for steel cord.

What makes them special? Condat's borax-free and titanium dioxide free wire drawing lubricants provide manufacturers both performance and improved safety. How? By balancing the need for security (no SVHC) and performance. VICAFIL Santale 6 is one of the few borax-free soaps that shows really good performance for steel cord wire drawing, offering an optimal adherent lubricant film all through the most demanding drawing lines, for both speed and number of drafts. That result was confirmed by our major customers, not just in a lab.
