Condat takes platinum medal again

Condat, a specialist in industrial lubricants, has announced the renewal of its Platinum medal awarded by corporate social responsibility (CSR) platform EcoVadis.

The company demonstrated its commitment through concrete actions and its efforts to evolve its business model over the long term. This proactive approach allows the company to keep the medal it obtained in 2021, and places Condat in the top one per cent of companies rated by EcoVadis.

Condat's commitment to responsibility, initiated decades ago, is based on one of the group's core values: build to last. It claims to be one of the precursors in the development of industrial lubricants with a reduced environmental impact, launching its first biodegradable lubricants more than 20 years ago.

The company also integrates sustainability goals at each stage of product life, as evidenced by its eco-designed

product self-assessment system, the Lubriscore®.

Reducing the carbon impact of its production sites is also a priority. In 2022, significant efforts were made, for example, on the French site in terms of reducing water consumption (-15 per cent) and electricity consumption (-18 per cent); and on transport, the company was able to reduce its CO₂ emissions by 8 per cent compared to 2019.

In February 2023, Condat integrated the Climate Enterprise Convention (CEC). The aim of this programme is to support, for ten months, companies and their managers to move towards being a "regenerative company" – to go beyond the ambition of a responsible company by shifting towards a business model that contributes to the environment.

With the climate challenges, Condat's objective is to encourage social and

Condat has again been certified platinum by EcoVadis

environmental commitment by offering a safe, efficient and least impactful product range.
