

## Comeback with proven expertise

Individually configurable Straight-line drawing machine with 4 drafts Type 16/4 for maximum dimensional accuracy and reproducible quality. © VWP Maschinenbau- und Service

Some comebacks mark the beginning of something new. Kistner Anlagenbau GmbH will be appearing at Wire 2026 together with VWP Maschinenbau- und Service GmbH.

A joint trade fair appearance based on decades of experience and supporting the wire industry with combined expertise. Both companies share a common goal: the design of new plants and the economic and future-proof further development of existing plants. Kistner Anlagenbau GmbH contributes its proven expertise in plant design, control technology, electrical engineering, and commissioning. As a partner, VWP Maschinenbau- und Service GmbH complements this expertise with design, manufacturing, and service.

While new plants are the optimal solution for production expansion and technology standards, intelligent retrofit solutions offer an economical alternative in the current market situation. Existing pro-

duction plants are equipped with state-of-the-art control and drive technology – a cost-effective way to extend the service life of proven machines and maintain the plants mechanically.

The collaboration between the two companies under the umbrella of the Kjellberg Group enables end-to-end complete solutions – from initial planning to final commissioning. Whether it's a new plant or a modernisation project, customers benefit from the combined expertise of both partners. The result is customer-oriented project management and efficient after-sales service.

"wire" offers the ideal opportunity for individual consultation and direct exchange on industry-specific requirements. Interested visitors are invited to discuss concrete solutions for their production challenges and learn about the practical advantages of this partnership.

## Leading the way in sustainable lubrication

Condat will showcase its latest solutions dedicated to electrical wire drawing, once again demonstrating its ability to cover the full range of lubrication needs – from soluble lubricants to neat oils and greases – required for this highly demanding process.

Among the highlights, "Vicafil TCU 255", a new high-performance micro-emulsion for copper wire drawing, has been specifically designed for multi-wire drawing machines requiring excellent cleanliness, lubrication stability, and long bath life. It offers superior detergency, low foaming, strong resistance to bacteria, broad compatibility with metals and machine components, and extended service intervals.

"Protelec 150", a cable grease compliant with European and international standards, provides reliable protection over a wide operating temperature range from -40 °C to +160 °C.

Completing the portfolio, "Vicafil TFA 1480" is a high-viscosity neat oil for copper electrical cable drawing, featuring excellent oxidation resistance and stable performance across all temperatures, ensuring consistent wire quality throughout the process.

At "wire" Condat will also unveil its low-carbon Mass Balance approach, designed to help customers reduce their carbon footprint without changing their processes or performance standards. By combining actions across renewable or circular raw materials sourcing, production and formulation, this initiative makes it possible to decarbonise while keeping the same lubricant performance, quality and usage conditions.

Actively engaged in this transition, Condat invites visitors to exchange with its experts and explore how Mass Balance solutions can support a more sustainable wire drawing industry.

At "wire" Condat reaffirms its position as a precursor and leader in responsible and sustainable performance for the wire drawing industry. With over 170 years of expertise, the French-origin, international lubricant group continues to innovate to reduce environmental impact while improving productivity and working conditions.
